

E-2-S 4.0

MOVE FROM ENSCRIBE TO SQL WITH MAXIMUM SPEED, FLEXIBILITY, AND COST EFFICIENCY

Today, your Enscribe databases can represent a significant liability. They impose significant restrictions on your organization's ability to adapt and innovate. On the other hand, it isn't like your teams have unlimited time and money to scrap Enscribe and start over from scratch. With E-2-S 4.0, you can seamlessly and affordably move off Enscribe and on to SQL/MX—so you can quickly start taking advantage of all the benefits this modern platform has to offer.

THE PENALTIES OF ENSCRIBE

Your teams are under pressure to boost application flexibility and accessibility. The longer you stay on Enscribe, the harder it will be to meet those imperatives.

By moving off Enscribe and on to a modern database like SQL/MX, your teams can realize a wide range of advantages. Once you're running on SQL/MX, you'll be able to leverage a range of development tools, boosting developer efficiency. Further, you'll be moving to platforms that are continuing to be enhanced, and you'll be able to expand and streamline data access, so you can far more effectively respond to your organization's demands for agility and innovation.

However, your Enscribe programs and databases represent a significant investment, and support business-critical services, so managing the transition can present a range of challenges. Manually rewriting programs can be extremely time consuming and costly, potentially requiring the hiring of expert DBAs and developers. Further, given the business-critical nature of Enscribe services, to be practical, migrations can't introduce disruption or downtime.

Where in the past, there were tools that offered to support the move from Enscribe to SQL, those tools were very costly and only offered support for SQL/MP. Because they didn't offer support for SQL/MX, the standard that is seeing continued enhancements, they only offered limited gains.

THE SOLUTION: E-2-S 4.0

With E-2-S 4.0, your organization can move from Enscribe to SQL/MX, and do so with maximum flexibility and efficiency, and minimal cost and effort. E-2-S 4.0 enables easy conversion of Enscribe calls to SQL/MP and SQL/MX—without any modifications to Enscribe apps. Further, it is the only solution that enables your teams to move from Enscribe directly to SQL/MX. Available on all HPE NonStop servers, E-2-S 4.0 offers full support for the Enscribe API, so you won't run into any limitations in your migration.

KEY DIFFERENTIATORS

Gain Optimal Migration Flexibility

E-2-S 4.0 supports incremental integration and maximizes long-term flexibility. Your teams can initially deploy E-2-S 4.0 in pass-through mode. Over time, you can apply the solution to a specific file or program, one at a time, or in batches as needed. Ultimately, you can migrate all programs, or continue to run in a hybrid fashion indefinitely. Plus, given SQL/MX's backward compatibility, the solution enables you to work with both SQL/MP and SQL/MX.

Establish 100% SQL Simplicity

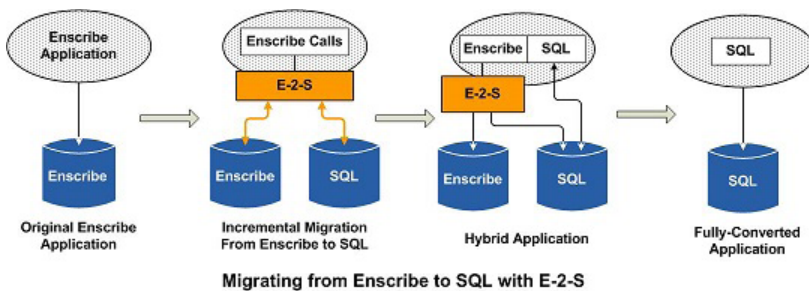

If your team ultimately wants to move to both SQL apps and databases, E-2-S 4.0 completely streamlines the process. E-2-S 4.0 programmatically generates SQL statements, developing, compiling, and executing the code required. With the solution, you can then access that code and then reuse it to build 100% SQL programs.

Maximize Performance

Alternative Enscribe-to-SQL/MP tools do a dynamic compile the first time each statement is run. These dynamic compiles can introduce significant performance overhead. By contrast, E-2-S 4.0 offers static compiles. The solution establishes a library of all possible access that takes place in an Enscribe environment and precompiles them. This provides significant performance advantages.

KEY BENEFITS

With E-2-S 4.0, you can break away from the limitations and inflexibility of legacy Enscribe platforms. Plus, you can make the move to modern SQL/MX environments, with minimal cost, disruption, and effort. With the solution, you can navigate to SQL/MX in a fashion that works best for your organization's specific near-term and long-term objectives, budgets, and requirements.

CONCLUSION

Your Enscribe databases impose significant restrictions on your organization, and the longer you remain on Enscribe, the bigger the penalties will grow. However, without the right tools, moving off Enscribe can be an immensely disruptive, costly, and time-consuming effort. Now, with E-2-S 4.0, you can seamlessly and affordably move off Enscribe—and start taking advantage of all the benefits SQL/MX has to offer.
