

- Multi-site Business Continuity
- Multi-system software distribution
- TCP/IP communications for application and file migration to new system
- NonStop server fundamentals - Fault-Tolerance Parallel Processing
- File Selection by wildcarding & qualified expressions
- Trigger execution Before or After files are synchronized
- EMS Message Alerts and File compression
- Complements Real-time database replication software
- File Synchronization Reporting
- FSYNcom – Operator commands
- Enhanced Purge capabilities

FileSync - Synchronizes Files & Applications between Nonstop Servers

FileSync is very affordable software used to replicate and synchronize non-database files (edit, objects, source, TACL, blobs, SQL, OSS and more) and application environments between HP Nonstop Server systems.

FileSync reduces errors associated with maintaining multiple duplicate application and system environments. With FileSync's automated lights-out operation, whenever customer-selected Files or Objects are created or modified, FileSync detects the changes and synchronizes the files with the target Nonstop Server system.

For System migrations, FileSync supports Expand and TCP/IP communications allowing for total file replication and synchronization to the new Nonstop Server, which may use the same Node Name.

FileSync combined with HP NonStop Remote Database Facility (RDF) or other Nonstop Real-time Database replication products, enables a complete Business Continuity processing environment.

FileSync supports many file types, including;

- Enscribe, NonStop SQL tables and partitions, Backup/Restore file types.
- Audited and Non-Audited structured files, Unstructured files.
- Edit files, Pathway environment files, TACL files.
- Application / System Batch, Object, source files.
- OSS files, directories and PAX file types.

FileSync supports **NCI-Sync**, Business Continuity software for CONTROL and CONTROL-CS from NETWORK CONCEPTS Inc(www.nci-sw.com). Filesync and NCI-Sync keep copies of CONTROL/CONTROL-CS databases on the HP NonStop Platform Synchronized in Real Time. Together, FileSync and NCI-Sync enables customers to extend the umbrella of business continuity in their development environments.
